UI-E-EJ1 is a subtracted CDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an Ecor I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tags for this library are: fetal eyes, AGATCAAGA
; lens, CGATTAAGCGA; eye anterior segment, ATGCGCGCT;
optic nerve, CCATTAAGTG; retina, CCGCG; Retina Foveal and
Macular, GTCC; RDE and Choroid, ACCTA. This library was
created for the program. Gene Discovery in the Visual

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (Pharmacia) with a modified polylinker; Site_1: Ecor I; Site_2: Not I; NCI_CGAP_ED1 is a normalized cDNA library containing the following tissue(s): Chondrosarcoma cell line CS5. The library was constructed according to Bonaldo. Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dr primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into p773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (d7)18 tail. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               D

UI-CF-EN1 is a normalized cDNA library containing the following tissue(s): Primary Lung Cystic Fibrosis Epithelial Cells. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT73-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CTGCTCAGGT.
                                                                                                                                                                                                                                                                                                                                                            /tissue_type="Primary Lung Cystic Fibrosis

NCI_CGAP_EIO is a cDNA library containing the following
tissue(s): Chondrosarcoma. The library was constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an ECOR I adaptor, digested
with Not I, and cloned directionally into pT773-Pac
vector. The oligonuclectide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  immunomodulatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibadies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous othe diagnostic or research purposes. The proteins may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 are used in the course of the invention for the identification and characterisation of the polynucleotide and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        associated proteins represented in AAB58106 - AAB58548. Lung cance associated proteins and polynucleotide sequences, their agonists, antagonists may have neuroprotective; cytostatic; cardioactive;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               C compounds or the progression of these toxic effects by determining the CC global changes in gene expression in thissues or cells exposed to the CC cells. Also included are methods of predicting at least one toxic effect of a compound or progression of a toxic effect, preferably the CC expression in a tissue or cell sample exposed to the compound compound comprising detecting the level of CC more genes listed in the specification, where differential expression of the genes is indicative of at least one toxic effect or progression of CC The method can also be used to identify an agent which modulates the CC in a cell. The methods utilise a set of at least two probes (on a solid especifically hybridises to a gene listed in the specification, a computer CC system comprising a database containing information identifying the expression level in a tissue or cell sample exposed to a hepatotoxin of a conformation riterface to view the information used to present information (CC listed in the specification. The method is user interface to view the information used to present information (CC listed in the specification. The method is used to a hepatotoxin of a congues in gene expression level in a tissue or cell of at least one gene CC changes in gene expression and for identifying toxicity markers in drug screening and toxicity markers in drug screening and toxicity assays. The genes and CC gene expression information of the physiological state of tissue or cell is characterised by centriliobaliar necrosis and steatosis. The present cCC sequence is an expressed sequence tag (EST) or cDNA derived from a gene condition of the physiological state of tissue or cell sequence agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 615
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Predicting toxic effects of compounds or the progression of these toxic effects by determining the changes in gene expression in tissues or cells exposed to the toxin and comparing these to gene expression in unexposed tissues or cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to methods for predicting

The sequences can be used for determining the presence of or predisposition to, or preventing or treating conditions associated with an ORRY-associated disorder. The nucleic acids can be used to express ORRY proteins in gene therapy cotors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, cardifers in hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial, or fungal infection, malaria, autoimmune disorders, asthma, allerdes, aplastic anaemia. burns, wounds, bone and cartilage damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.

The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, haematopolesis regulating activity, thissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
